VISHAAL DAYASHANKER

Chicago, IL | +1 (512) 300-9480 | vishaalshanker@gmail.com | GitHub | LinkedIn | Website

EDUCATION

M.S. Computer Science, University of Illinois Chicago (UIC) — GPA: 4.0/4.0 — Expected May 2027
B.Tech. Computer Science & Engineering (AI & Robotics), VIT Chennai — GPA: 3.7/4.0 — May 2025

EXPERIENCE

Teaching Assistant & Project Coordinator — **Sep 2026 – Present**
University of Illinois Chicago (UIC) College of Business Administration, Chicago, IL

- Serve as primary liaison between 5 client-sponsored student project teams 20 students and external clients including Cook County Health, translating business requirements into scoped deliverables, tracking progress, and resolving technical and organizational blockers
- Mentor student teams across the full solution lifecycle, from requirements gathering through delivery, ensuring alignment with client expectations and project standards
- Evaluate deliverables against client requirements by attending client meetings and providing structured, actionable feedback to teams
- Built n8n automation workflows (LLM and API integrations) and step-by-step implementation manuals used as course assignments

AI/ML Intern — **Jun 2026 – Aug 2026**
Mphasis, United States (Remote)

- Built an LLM-powered task extraction service (Groq Llama 3.3 70B) that converts free-text user requests into structured, actionable tasks, turning an ambiguous product requirement into a reusable, production-ready AI component
- Designed the supporting data layer (Supabase/PostgreSQL, row-level security) and real-time sync (Redux Toolkit) so AI-generated tasks flowed directly into task, reward, and wallet features

Software Developer Intern — **Feb 2025 – Jul 2025**
SolidPro, Chennai, India

- Delivered an end-to-end RAG solution for the Lawly AI product (document chunking, embeddings, Weaviate, Hugging Face, FastAPI) enabling contextual Q&A over uploaded legal documents; product deployed to production on Azure
- Containerized the Weaviate vector database with Docker for consistent local development and testing of the retrieval pipeline
- Built a full-stack timesheet application (Django, HTMX, PostgreSQL) that replaced manual tracking and reduced timesheet review effort for department heads; developed in an Agile, Git-based workflow with direct stakeholder input

Research Contributor — **Dec 2024 – Jun 2025**
Prof. K. Valarmathi, VIT Chennai, Chennai, India

- Co-authored 4 research papers (1 published, 3 under review) applying ML, deep learning, SARIMA forecasting, and ensemble modeling to medical imaging, obesity classification, and energy forecasting

AI Data Analyst Intern, Project Lead — **Oct 2024 – Nov 2024**
Excelerate, India (Remote)

- Led a data analysis engagement for Rochester Institute of Technology as project lead, gathering stakeholder requirements, building data pipelines, and delivering Power BI dashboards and workflow-automation recommendations to decision-makers

Data Analyst Intern — **May 2024 – Jul 2024**
Atmecs Global Inc, Hyderabad, India

- Performed data preprocessing, exploratory analysis, and business intelligence reporting (Python, Pandas, NumPy, Power BI, Matplotlib, Seaborn) to support stakeholder decision-making

PROJECTS

Medical Document Intelligence System (BioBERT, Groq Llama 3.3, MCP: Calendar, Gmail, Slack)

- Designed a five-module agentic AI pipeline that extracts, simplifies, and routes medical information, integrating with Calendar, Gmail, and Slack for automated follow-up
- Replaced a fully manual document review workflow with end-to-end automation, converting unstructured medical documents into patient-facing outputs

Open Vocabulary Object Detection & Tracking (YOLO World, VisDrone)

- Improved mean average precision by 177% by fine-tuning on VisDrone and optimizing learning rate and augmentation strategy
- Served as Fine-Tuning and Tracking Lead on a 3-person team, directing the model tuning and tracking approach and guiding integration of teammates' contributions into the overall pipeline

Large-Scale Misinformation Detection (Python)

- Built large-scale data ingestion, cleaning, and transformation pipelines in Python to structure 5.9M+ comments and 440K+ videos for analysis
- Applied statistical methods to the structured dataset to detect coordinated narrative manipulation and amplification patterns

Autonomous Job Application Agent (Hermes, Claude API, Telegram Bot, Google Drive API)

- Built an autonomous AI agent that scrapes LinkedIn job postings, ranks them against a resume, and generates a tailored resume and cover letter for the top matches, with deduplication and per-job organization
- Deployed the agent on a cloud VPS with a Telegram bot interface for remote control, automatically uploading generated documents to Google Drive

PUBLICATIONS

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, C++
AI/ML & Solution Design: RAG, Agentic AI, MCP, NLP, GPT, GANs, VAEs, Hugging Face, LlamaIndex, LangChain, Weaviate, PyTorch, TensorFlow, Scikit-learn
Development/Data: FastAPI, Django, React, React Native, Redux Toolkit, REST APIs, PostgreSQL, MongoDB, Supabase, Pandas, NumPy, Power BI
Tools/Cloud: Git, GitHub, Docker, CI/CD, Linux, AWS, Azure, PySpark
AI-Assisted Development: Claude Code, GitHub Copilot, OpenAI Codex, Replit AI, n8n, Hermes Agent
